SUMMARY

A developer, creative coder, and software engineer who specializes in full-stack web development. I have a proven track record of designing and implementing innovative web solutions. My expertise lies in developing robust and user-friendly applications, ensuring seamless user experiences across various platforms. Understanding of responsive design principles and cross-browser compatibility. I am eager to apply my knowledge and skills to real-world projects and contribute to a dynamic development team.

EXPERIENCE

01/2024 - Present

MERN-STACK DEVELOPER

Lahore, Pakistan

Freelancer

- Developed full-stack applications using the MERN stack (MongoDB, Express.js, React, Node.js), providing end-to-end solutions for clients across various industries.
- Interacted with database systems, such as SQL Server, for data storage, retrieveal, and manipulation.
- Enhanced user authentication and security by implementing JWT and securing user data across platforms.
- Worked with RESTful improving data fetching efficiency and ensuring smooth communication between front-end and back-end systems.
- Provided technical support to other developers on the team during the development process.

SKILLS

Programming Languages: JavaScriptNextJSReactNodeExpress

JWT token for securityReact Hook FormRedux ToolkitTailwind CSS

BootstrapHTMLDatabase: MySQLMongoFirebase

Version Control: GitCode Repositories: GitHubCommunication: Microsoft Teams, Skype

PROFESSIONAL PROJECTS

Dog Security Guards (Security Services)

Description: I developed a website designed to help clients find dogs for security purposes, effectively matching their needs with suitable security dogs. This platform streamlines the process of locating and securing trained dogs for protection services.

Tools: HTML5, Bootstrap, JavaScript

Blog Management System

Description: A dynamic blog management system is a web application that simplifies content creation and management. Built with Next.js, Tailwind CSS, and MongoDB, it offers a user-friendly interface for uploading, categorizing, and publishing blog posts. With its responsive design and efficient data handling, it empowers content creators to reach a wider audience.

MERN Authentication

Description: I developed an advanced MERN (MongoDB, Express.js, React, Node.js) authentication system designed to enhance security and user experience. Key features of the project include:

- Email Verification: Users receive a verification email upon registration to confirm their email address. This ensures the authenticity of user accounts and reduces spam.
- Password Recovery: Implemented a secure password recovery mechanism where users can reset their passwords via a link sent to their registered email. This enhances account security and user convenience.
- Welcome Emails: New users receive a welcome email upon successful registration, providing a personalized touch and important information about the platform.
- User Authentication: Integrated secure user authentication methods using JWT (JSON Web Tokens) and bcrypt for password hashing to ensure data protection and secure access.

EDUCATION

2020 - 2024

●

Bachelor's in Information Technology

Virtual University

2017 - 2019

●

Intermediate in Computer Science

Govt College

2015 - 2017

●

Matriculation

Iqra School

CERTIFICATE

WEB DEVELOPMENT

2023

TEVTA COLLEGE (GOVERNMENT INSTITUTE)
