- English
- Urdu
- Punjabi

CAREER OBJECTIVE

I have a strong foundation in full-stack JavaScript development, specializing in designing and developing web applications in the MERN stack. I understand front-end and back-end technologies, including React.js, Next.js, Node.js, MongoDB, and Express.js. project. Understanding of responsive design principles and cross-browser compatibility. I am eager to apply my knowledge and skills to real-world projects and contribute to a dynamic development team.

PROJECTS

Dog Security Guards (Security Services)

<https://dog-security-guards.web.app/index.html>

I created this website when I was a university student when my client approached me with the need for a website that effectively. It helps those who need dogs for security purposes.

- Design page fully responsive (Desktop, Tablet and Mobile) and browser compatible using Html5, CSS, Bootstrap and JavaScript.
- Create multi step full validate Form for contact us page.

Blog Management System

<https://github.com/hamadali03/blogging>

A dynamic blog management system is a web application that simplifies content creation and management. Built with Next.js, Tailwind CSS, and MongoDB, it offers a user-friendly interface for uploading, categorizing, and publishing blog posts. With its responsive design and efficient data handling, it empowers content creators to reach a wider audience.

- Design page fully responsive (Desktop, Tablet and Mobile) and browser compatible using TailwindCSS and NextJS.
- Created a Server Side Nextjs web app with Admin Dashboard deployed to Github.
- I created a dashboard in which Upload a blog with a title, description, and image, and select which category to use. I used MongoDB to store data in it.
